

Protect your valuable **DATA**

MONITORED

UPDATED

BACKED UP AND PROTECTED

Security solutions will help your business succeed by developing a systematic approach to managing security, risk and compliance that will feature industry-leading technology.

CONSULTING SERVICES

For many financial institutions, healthcare providers, and other industries with heavy Security and Compliance regulations, technology is becoming an unwieldy beast.

Industry regulations grow, technology changes constantly, and your staff quickly becomes overwhelmed with managing the system. And on top of all that, you are facing your next audit.

If you are facing an audit, Emergent Networks can help. We offer solutions and services that can help you prepare for your audit, guide you through the process, and implement new post-audit solutions so the findings won't come up again.

Assessment Analysis & Remediation Matrix

PROFESSIONAL SERVICES

Despite all the threats that exist doing business in the world today, there are several approaches that can be taken to greatly mitigate the risks to a company environment and information assets with good planning and execution.

Our Security engineers are experts at vulnerability remediation—implementing and documenting the steps taken to protect your data. Our team can create, add or make changes to your Security policies and programs to secure your data, log devices and hardware, and be prepared without hindering your ability to do your work.

Vulnerability Remediation • Policy Repair • Program Repair • Information Security Program • Network Segmentation • Disaster Recovery

Technology systems should work for you, not against you. Emergent Networks Security offerings can help streamline your technology solutions in a cost-efficient, successful system that serves your business.

Support

MANAGED SERVICES

LOG MANAGEMENT

Log Management is becoming more and more complex, and log sources are more numerous and varied. IT infrastructure is also moving from traditional hosted and on-premise deployments into cloud, requiring new deployment models. Compliance mandates such as GLBA, HIPAA and PCI DSS have similarly added new log management deliverables. Emergent Networks can solve these challenges by making Log Management simple to implement and easy to afford and manage with support of all major compliance mandates.

UNIVERSAL THREAT MANAGEMENT

With universal threat management you get a global view of the threats impacting all of your infrastructure—day or night—without massive investments in multiple solutions or additional staff. Threat Manager identifies suspicious activity in the network traffic, quickly identifying threats and enabling rapid responses, helping meet compliance challenges and keeping your data safe.

LEVELS OF SECURITY SUPPORT SERVICES

| | |
|---|----------|
| Includes Gold and Silver. Log Management, Analysis and Reporting, Threat and Trend Monitoring, Controls Validation, Customizable Compliance Reporting | PLATINUM |

SECURITY FOCUSED EXPERIENCE

Our security assessment process is designed to address critical security controls, manage them into processes, deploy security solutions in phases and manage the security lifecycle.

Our process makes it easy for you to visualize the security web within your company and address critical security controls, which helps create an ongoing, organized and long-term strategic plan.

SECURITY AWARENESS TRAINING

Educate the human! Tailor and plan out your security awareness training program. Learn to understand what the bad guys want, how they use your information and the tactics they use to attack.

Choose topics from core awareness, advanced awareness and role-specific awareness such as: Information privacy, protection and destruction, smartphone security, security beyond the office and safer web browsing.

Real-Time or Scheduled Threat Scans • Security Awareness Training • Automated Log Management • Ongoing Proactive Security Planning
